Model of Equatorial Mount

8 Feb 1965

Built pedestal and yoke, week ended Jan 29. In week ended 8 Feb 5, CC built hub to my drawing dated 15 Jan 1965, mounted it on yoke, and welded pedestal down to steel baseplate. Kennedy 10 ft. dish was patched to the hub. HA screws worked well; dec drive by chain needed brake. Antenna c.g. fell reasonably within base.
